

13% detected as AI

The percentage indicates the combined amount of likely AI-generated text as well as likely AI-generated text that was also likely AI-paraphrased.

Important Notice

The percentage shown reflects a probabilistic assessment and should be treated as an indicator, not a definitive conclusion. Results may vary depending on writing style, subject matter, and document structure. Always use this report as one of several points of reference rather than a sole determining factor.

Guidelines

This report analyzes long-form writing, such as essays, dissertations, and articles. Highlight colors indicate likelihood of AI detection flagging: cyan for high, light purple for moderate, unhighlighted for low.

Non-qualifying content (e.g. bullet points, annotated bibliographies, tables) is not analyzed and may cause the highlighted text to differ from the overall percentage shown. If the document contains non-selectable text, scanned images, or other formatting issues, the score may be inaccurate.

Details

Executive Summary: EcoTab introduces a "waterless manufacturing" model to the Bangladeshi FMCG market by replacing traditional liquid glass cleaners with concentrated, effervescent tablets. By utilizing a Drop-Fill-Clean method, consumers dissolve a 5g tablet in 500ml of tap water using a permanent, reusable bottle, which eliminates single use plastic waste and reduces shipment weight by 90%. Our strategy targets urban middle to upper-middle-income household and young professionals who prioritise sustainability and modern, space saving solutions. EcoTab is positioned as a smart and responsible choice through a differentiated marketing strategy that emphasizes the convenience of the "last bottle you'll ever buy". To ensure rapid market entry, the brand employs a combined pricing strategy including penetration and psychological pricing to encourage trial and habit formation. The launch is supported by an Integrated Marketing Communication (IMC) approach that uses social media and influencer marketing to educate consumers on the product's cost savings and environmental impact. By aligning high-performance cleaning with significant reductions in logistics costs, EcoTab establishes a new standard for sustainable household care in Bangladesh.

Answer 1: Based on Kotler and Armstrong's 8-stage new product development process (Kotler et al., 2024)., EcoTab follows this path:

- 1. Idea Generation:** The idea was generated from a real market problem in Bangladesh. Bangladesh has high plastic waste from cleaning product bottles. Existing brands sell liquid cleaners in plastic packaging. Additionally, after a personal market survey conducted in several areas in Dhaka, it showed no availability of eco-friendly dissolvable cleaning tablets which indicated a strong market gap and opportunity to introduce an innovative alternative. This process represents the systematic search for new product ideas as defined by
- 2. Idea Screening:** After screening the idea, it indicates that this kind of tablet is environmentally sustainable and reduces the use of plastic. It is also easily moveable and lightweight, which reduces the shipment cost as well unlike the liquid cleaner in plastic bottles. It also fits FMCG behaviour as a household cleaning use where this kind of product's frequent uses are common.
- 3. Concept Development and Testing:** The idea developed a rPET bottle and refill concept by moving away from traditional single use plastic which can be presented to the potential customers. The product is a concentrated tablet that dissolves in water to create a cleaning solution. The concept emphasizes convenience, affordability and environmental benefit. The target is urban households, students and feedback from thesis consumers would help refine the concept before moving forward.
- 4. Marketing Strategy Development:** This involves designing an initial marketing strategy by targeting a specific market, primarily urban middle class consumers who are both price sensitive and aware of environmental issues. The product will be positioned as an eco-friendly alternative of traditional cleaning liquids. The proposition focuses on cost savings, reduced plastic usage and convenience.
- 5. Business Analysis:** Dissolvable tablet significantly reduces the packaging and transportation costs as it doesn't have extra weight for water and plastic bottles. It makes the overall costs lower and creates higher potential profit margins. The product's refill based model encourages repeated purchase of the product.
- 6. Product Development:** The cleaning tablets will be made using biodegradable surfactants, citric acid and safe cleaning agents. The product will be packed in eco-friendly sachets instead of plastic and a reusable spray bottle will be provided too as a part of the starter kit to re-inforce the zero waste concept. The goal is to provide a product that matches both performance expectations and environmental standards.

7. **Test Marketing:** Before a full-scale launch, the plan is to introduce the products in selected areas in Dhaka, like, Gulshan, Dhanmondi, Bashundhara, etc., to test the product. It helps to see the customer acceptance, ease of use and satisfaction level, allowing us to make adjustments before launching the product everywhere.
8. **Commercialisation:** Finally, to make everyone aware of the product, we need to expand the distribution channel to superstores, local stores, e-commerce platforms, etc. Promotional campaigns will focus on making the consumers aware of the product, its cost effectiveness and environmental impact. At this point, the company needs to achieve market penetration and establish a strong brand presence.

Answer 2: According to the Principles of Marketing (Kotler et al., 2024)., designing a customer value driven marketing involves selecting the right customers to serve and deciding how to create value for them. This process includes market segmentation, targeting, differentiation and positioning.

1. **Market Segmentation:** Market segmentation means dividing a broad market into small groups of consumers with similar needs and characteristics. (Kotler et al., 2024). For dissolvable cleaning tablets segmentation can happen based on geographic, demographic, psychographic and behavioral factors. Geographically, the focus is on urban areas such as Dhaka where modern retail systems and awareness are higher. Demographically, the product targets the middle income households, students and young professionals. Psychographically, it targets those consumers who are environmentally conscious and values convenience. Behaviourally, it targets individuals who frequently buy household cleaning products and are open to try innovative solutions.
2. **Targeting:** After segmentation the market, the next step is to evaluate and select the segments that consume the product. The primary target market for this product is urban middle class consumers who are price conscious and aware of the environment. These consumers are most likely to try new innovative solutions for a product like liquid cleaner which destroys the environment. A secondary target market includes small businesses like offices and cafes where they require regular cleaning and the low cost might be beneficial for them as well.
3. **Differentiation:** Differentiation involves distinguishing the product from competitors by offering unique benefits. Dissolvable cleaning tablets stand out because it reduces the need of plastic bottles, transportation costs and offers a convenient form. The waterless shipping concept and environmental friendly

concept makes it unique, compared to the traditional cleaners that are pre-mixed with water, harsh chemicals and can harm the environment.

- 4. Positioning:** Positioning means how the product is perceived in the minds of consumers comparative to the competing products. (Kotler et al., 2024). The cleaning tablet will be positioned as an innovative, eco-friendly alternative compared to traditional cleaning liquids. The product aims to stand as a smart and responsible choice for modern consumers. By emphasizing sustainability, affordability and convenience, the brand can establish a good position in the market.

Answer 3: Our brand segments the consumer using a multi-dimensional approach, combining demographic, geographic, psychographic and behavioral variables to precisely target high-potential customer groups for water-soluble cleaning tablets.

- Demographic Segmentation

We Primarily target middle to upper-middle income households, working professionals and young families. These groups have higher purchasing power, maintain regular cleaning routines and show greater willingness to adopt innovative household products that offer efficiency and value.

- Geographic Segmentation

The initial market focus is on urban and semi-urban regions, where consumers have access to modern trade channels, such as supermarkets or e-commerce platforms and are more receptive to new product formats. These areas also face space constraints and increasing demand for compact, easy to store solutions.

- Psychographic Segmentation

A core segment includes environmentally conscious and lifestyle-driven consumers who prioritize sustainability, convenience and modern living. This includes individuals seeking to reduce plastic waste, simplify household routines and adopt smarter, more efficient cleaning solution.

- Behavioral Segmentation

The brand segments consumers based on their usage patterns and attitudes toward cleaning products. Which includes,

- Consumers looking easy-to-use solutions
- Buyers interested in innovative or multi-purpose cleaning products
- Customers loyal to eco-friendly or premium household brands

- First-time adopters attracted by cost efficiency and portability

While all four segmentation bases guide our strategy, the brand places strongest emphasis on psychographic and behavioral factors, as these directly align with the product's core value proposition- convenience, sustainability and innovation.

Answer 4: Introduction As the newest innovation in the sphere of cleaning at home, dissolvable cleaning tablets are able to offer a novel approach to dealing with plastic pollution by offering a quality cleaning alternative which does not cost much. In order to develop a good promotion strategy for the product, it is necessary to conduct market segmentation first and identify the market segment to address. The next part of the paper focuses on the issue in details and offers a good market segment to work with in case of dissolvable cleaning tablets.

Identifying Attractive Market Segments

1. Demographic Segmentation: In order to define appropriate demographic criteria, some general features of potential dissolvable cleaning tablet buyers need to be identified. These segments could include:

- Age Groups: Consumers within the age range of 25-50 years old would be considered a segment for dissolvable cleaning tablets because they are usually responsible for cleaning at home.
- Income Level: Consumers with the middle and upper classes will become target consumers since they have enough money for environmentally safe goods.
- Family Structure: Single persons or families with kids could be considered as well as people who care about ecological issues.

2. Psychographic Segmentation: Considering the psychological features of potential dissolvable cleaning tablet buyers, one may assume that among them there could be found:

- Environmentally Conscious Consumers: People caring about environmental matters would pay their attention to dissolvable cleaning tablets since they do not pollute the environment.
- Health-Conscious Consumers: Health-conscious customers who prefer non-chemical cleaning solutions will be attracted by dissolvable cleaning tablets.
- Budget-Conscious Consumers: People willing to save their budget will purchase dissolvable cleaning tablets because they are cheap and efficient.

3. Geographic Segmentation: As far as geographical factors go, people living in urban areas where more environmentally conscious people live could be considered

as potential dissolvable cleaning tablets' users. So, Dhaka, Chittagong, and Sylhet could be selected as the locations to target.

4. Behavioral Segmentation: Different customer behavior patterns should be taken into account while identifying market segments for dissolvable cleaning tablets, such as:

- Green Consumers: Green consumers will be looking for environmentally friendly products to use.

Convenience Seekers: These consumers are seeking convenient cleaning solutions that are easy to use and that fit into their hectic lifestyles. The cleaning tablets are dissolvable, which provides convenience since one does not need to purchase new plastic bottles and they can be ready in a short time with tap water.

- Cost-Conscious Shoppers: consumers seeking to save on their expenditure on cleaning products in the long run. The dissolvable cleaning tablets lower the price of recurrent purchases since individuals do not have to purchase the plastic containers; rather, they purchase the tablets.

Selection of a Targeting Strategy.

Once the identification of the different market segments is done, then it is important to select the best targeting strategy. The following can be considered as strategies of dissolvable cleaning tablets:

1. Differentiated Marketing Strategy: Since various market segments have been determined, a differentiated marketing approach is the right fit for this product. The strategy will enable the brand to appeal to various market segments, including environmentally conscious customers, health-conscious customers, and budget-conscious customers. The personalization of messages to meet the needs of each segment will help the brand appeal to a wider group of consumers and achieve its market share.

2. Undifferentiated Marketing Strategy: Alternatively, there is an option of an undifferentiated market strategy, in which the brand would be based on the overall attractiveness of the environmental benefits and cost-saving features of the product. The approach would work well to attract a wide audience with similar interests on sustainability and cost.

3. Concentrated Marketing Strategy: An alternative may be a highly targeted marketing approach, targeting the environmentally conscious segment in particular. This approach entails focusing the marketing activities on one very specific market segment. The brand might capitalize on eco-friendly messages, focus on the zero-waste aspect of the product, and participate in collaborations with environmental organizations to market its idea of sustainability.

4. Micro-targeting Strategy: A further step-up would be micro-targeting, where the brand targets certain consumer personas depending on their behavior, interests, and lifestyle choices. This would enable very personalized advertising campaigns, including online advertisements or social media campaigns targeting those who have been interested in sustainable products or cleaning products.

Answer 5. Differentiation and Positioning strategy for Optimal Competitive Advantage

5.1 Mapping the Competitive Space and the Gap

In creating a differentiation and positioning strategy, it is important for marketers to know what the competitors are doing. Marketers often depict perceptual mapping, a diagrammatic method, of customers' perceptions of competitive products on some two dimensions, such as cost efficiency and eco-friendliness (Armstrong & Kotler, 2021). In the case of the Bangladesh cleaning market, the two main dimensions are perceived cost-efficiency in the long run and eco-friendliness. Cleaning brands like Lizol and Mr. Brite stand for low eco-efficiency and moderate cost-efficiency; while Savlon is somewhat more expensive but also more eco-efficient. The highly eco-friendly or high eco-friendliness region is filled with imported brands like Seventh Generation, but tends to be too costly to the customer. Thus, the top right, most eco-efficient, most econ-efficient box remains empty. Innis Maggiore (2018) says the reason for doing a positioning map is to find a good place for a brand to be in the minds of customers, and that's exactly what's been done here.

5.2 Differentiation Strategy

Armstrong and Kotler (2021) highlight five main ways of differentiation as: product, services, channels, people and image. The brand will use all of the above. Product Differentiation. The tablet (with the fizzy format) is a unique offering from any other cleaning product in Bangladesh. In heavily-congested product categories such as cleaning products, a source of differentiation is product innovation that marketers can exploit to captivate the consumer with new product solutions and uses (Yellow Coin Communication, 2024). The tablet format reduces the liquid content (90%) found in liquid cleaners - 10 tablets can fit in a shirt pocket, but 10 Lizol bottles need a bookshelf. Apart from conversion the eco-friendly formula of biodegradable surfactants, citric acid and essential oils is safe. According to Grand View Research (2024), growing consumer awareness of allergies and respiratory issues due to chemical cleaners has fuelled the market for natural, non-toxic surface cleaners. Finally, your Starter Kit, the reusable, refillable spray bottle sold "at entry" is an augmented product (Armstrong & Kotler, 2021), which binds the consumer directly to a lighter version of the core product and delivers on last purchase promise.

Service Differentiation. Insight to Action (2022) highlights that delivery subscriptions are an increasing point of differentiation amongst natural cleaning products, offering

the consumer convenience and predictability in their purchase. The brand will build on this by offering subscription-based refills via Dhaka's existing bike-courier (Pathao, Shohoz) services. Given the low weight of each cleaning tablet, the cost of production is extremely low. The on-boarding of customers through social media and WhatsApp messaging will also allow them to understand the Drop-Fill-Clean concept - something that is not being done in any current FMCG cleaning brands of Bangladesh.

Channel and Image Differentiation. The brand will use the direct-to-consumer channel, as opposed to the traditional indirect distribution channel, to build direct contact with consumers, unique communications and 100% brand positioning. IEOM Society International (2024) suggests brands should align their strategies with consumers' values and sell products for their sustainability benefits in order to appeal to eco-committed consumers and succeed in the market. The brand will be built on three emotional values: eco-proud, when the consumer's purchase becomes the eco-citizen action; clever frugality, where eco-consumption becomes frugal, rather than the framed choice (only for the rich); smart simplicity, where the Drop-Fill-Clean process make the consumer a "modern homemaker".

5.3 Position and Value Proposition

The more-for-less position is one of the most valuable brand positions (Armstrong & Kotler, 2021). This brand allows more (more sustainable, convenient, safe and space efficient storage) for less in the long term and less plastic waste. Vuong et al. (2024) discuss the shift towards eco-friendly products in FMCG markets of emerging countries. More importantly, the brand does not make consumers pay more for green - it makes sustainability the practical, cost-effective solution by offering the brand as a value for money brand to cost sensitive consumers in Bangladesh who may otherwise think green products are for privileged wealthy people (who pay for imported goods). Based on the segmentation and targeting decisions elaborated in the first half of this report, the brand positioning is as follows: for the price sensitive and eco conscious consumer in Bangladesh, this is the only zero-waste cleaning system that would take out expensive one-use plastic bottles and replace them with tiny dissolvable effervescent tablets, because it reduces 90% of water, weight and waste involved in cleaning, forever.

5.4 Criteria of SCA

Armstrong and Kotler (2021) state that a differentiator is only worth considering if it is: important, distinctive, superior, communicable, pre-emptive, affordable, and profitable. Our suggested differentiators checks all the boxes. Plastic pollution (and cost savings in the long run) matters to Bangladeshis. The tablet format is not available locally and thus novel. Drop-Fill-Clean concept is "social-media friendly". No-water production and light weight in product enables high affordability and profitability.

360iResearch (2015) highlights that disruptive eco-cleaning brands are increasingly creating sustainable niches through a combination of zero-waste packaging design and "social" branding which is attractive to their niche markets. This business is part of such a demographic and needs to be clearly communicated and defended as the market expands and potential competitors emerge. This is supported by IEOM Society International (2024) that notes effective and ongoing communication of sustainable initiatives is key to growth and market outlook for green markets.

Answer 6: For our household cleaning product, which is a water soluble cleaning tablet, we will use various pricing strategy. Since it's a new product and people are not aware of it, we have to use a combined pricing strategy. We will use a combined pricing strategy of penetration pricing strategy, psychological pricing strategy, perceived value pricing strategy, and competitive pricing strategy.

Penetration pricing strategy:

Penetration pricing strategy is used for new products. When companies are launching a new product, they use this strategy as it's an effective pricing strategy. In this strategy, the company sets a low price for the product initially, and over time they will increase the price and set its actual price. The reason behind setting a low price initially is to give a trial of the product, the company expects that customer will use their product since it's low in price, and when the product becomes a part of their daily life, customer found it as convenient, then they will increase it. According to Kotler and Armstrong (2020), penetration pricing strategy helps to capture the market effectively and create a strong image in customers' minds. Basically, at the beginning, the company wants the customer to use their product and acknowledge about its features. For water soluble cleaning tablet, this pricing strategy will be effective. At first, we will set a lower price to use our product and over time we will increase it, when we are sure that the product has become a part of their daily life.

Psychological pricing strategy:

In this strategy the company use a psychological method. Instead of setting a product price \$3 they set its price at \$2 and 99 cents and its look cheaper to customer. When customer see two products in front one price is 100 tk and another one is 99 tk, they will choose the 99 tk product, since it looks cheaper and the customer may think it will save their money or this product is in their budget range. For our tablet we can use this method to look our product cheaper and affordable then other cleaning product.

Perceive value pricing strategy:

This pricing strategy emphasize on customers preference rather than it cost. Perceived value means how the customers accept the product and what value it is

giving to them. The water soluble tablet is a very new product and it is offering many good things to customers. For instance, as it's a tablet so, it doesn't need a space like other cleaning liquid bottle needs, people can travel anywhere with this tablet. Also, its an eco friendly product and it doesn't need plastic bottles like other liquid cleaner bottle need. Though in the beginning we set our price low but when customer get convenient from the product, we can increase the price according to customers preferences.

Competitive pricing strategy:

Evaluating competitors product and price is the main game changer. For water soluble cleaning tablet we need to evaluate our competitors price. In market there are some established brand offering cleaning product, we have to evaluate their price and set our price close to them. If we set the price too high, customer wont buy it as it's a new product. Also, if we set the price very low it also create an image to customers mind that the product is not good. So, we need to set price close to our competitors product price.

These combination of pricing strategy will help us to enter in the market easily and create a strong brand image to customers mind. Followoing these combined strategy will also help us to make our product a part of customers daily life.

Answer 7: In the Bangladeshi FMCG market, the water-soluble cleaning tablets can only successfully be introduced by adopting the Integrated Marketing Communication (IMC) approach which will ensure clarity and consistency along with maximum impact across all communication channels (Kotler & Armstrong, 2018; Belch & Belch, 2021).

- Target Audience Identification

Based on the segmentation strategy mentioned earlier, the communication efforts will primarily target urban middle and upper-middle-income consumers. People who are actually environmentally conscious individuals and young professionals with proper knowledge. These segments are more likely to adopt innovative and sustainable products due to their awareness about environments and values (Kotler & Keller, 2016; Solomon, 2019).

- Communication Objectives

According to (Kotler & Armstrong, 2018), following the AIDA model (Attention, Interest, Desire, Action) for communication provides a structured roadmap for influencing consumer behavior :

- I. Awareness: Inform the consumers about the new dissolvable tablet concept and its necessity
- II. Interest: Explain how the product works and its unique benefits
- III. Desire: Emphasize the cost savings and environmental impact they will be creating.
- IV. Action: Encourage trial and purchase

Using structured communication objectives improves message effectiveness and conversion of consumers towards a product (Belch & Belch, 2021).

- Message Design

Kotler & Keller (2016) labeled convenience, sustainability and affordability as key drivers in FMCG products for consumer value perceptions and as a reason the core message should focus on these things. A clear and consistent value proposition helps in building strong brand positioning and acts as a differentiation factor from others (Ries & Trout, 2001). According to Kotler & Armstrong (2018), the “Drop–Fill–Clean” concept simplifies product understanding, which makes more sense for innovative products entering a market like Bangladesh where most consumer does not easily get attracted towards something a bit technical for them to understand.

- Communication Channels

Like the “eggs in different baskets” concept, an integrated mix of communication channels will be used to maximize brands' reach to people and convert into engagement, as multi-channel strategies are more effective than single-channel approaches (Belch & Belch, 2021):

- I. Digital Platforms: Social media marketing allows precise targeting and high engagement nowadays (Tuten & Solomon, 2017)
- II. Influencer Marketing: Influencers increase credibility and trust among mass consumers (Freberg et al., 2011)
- III. Video Marketing: Visual-based content improves product understanding and persuasion (Kotler & Armstrong, 2018)
- IV. Retail Promotion: In-store displays influence purchase decisions at the point of sale, turning more conversions (Kotler & Keller, 2016)
- V. Outdoor Advertising: Increases brand visibility and recall in urban markets (Belch & Belch, 2021). This is also necessary because out of sight means out of mind.

- Content and Consumer Education

In a new product like this, educating the consumer is a must to reduce uncertainty and perceived risk factors (Kotler & Armstrong, 2018). Contents that are informative

like tutorials and infographics of the consumers impact helps consumers understand product benefits and increases the likelihood of adoption to the new product (Solomon, 2019).

- Sales Promotion Strategies

Freebies and budnles will be used to encourage trial for sales promotion discounts because they provide immediate incentives and mitigate financial risk by getting them started with the product (Kotler & Keller, 2016). Trial opportunity is very important for new product adoption in FMCG markets (Belch & Belch, 2021).

- Customer Engagement and Feedback

Creating a space for the consumers to say and then engaging customers through user-generated content, reviews and interactive campaigns helps build trust and long-term relationships with consumers(Kotler & Armstrong, 2018). Consumer engagement is something that really strengthens brand loyalty and enhances word-of-mouth marketing organically without monetary investment (Solomon, 2019).

- Evaluation and Control

Lastly, the effectiveness of communication strategies will be evaluated using some key performance indicators like reach, engagement, conversion rates and customer feedback. These metriceese needs to be under regular monitoring and adjusting whenever needed for improving marketing effectiveness (Kotler & Keller, 2016; Belch & Belch, 2021).

Conclusion: EcoTab represent a strategic shift in the Bangladeshi glass cleaner market by connecting the environmental responsibility with consumers affordability. By utilising a "waterless manufacturing" model, the brand successfully addresses the urgent need for plastic waste reduction while overcoming traditional logistics challenges through compact, lightweight tablets that reduce shipment weight by 90%. Through a multi-dimensional segmentation strategy targeting urban, eco conscious consumers and the implementation of a penetration pricing model, the brand is well-positioned to disrupt the market dominance of bulky, single-use liquid cleaners. By presenting a Drop-Fill-Clean habit, EcoTab establishes a sustainable refill model that creates value for both the consumer and the environment.

Recommendation: To ensure long-term market position, EcoTab should prioritize the following strategic actions:

Consumer Education: Since the dissolvable tablet concept is new to the Bangladeshi market, the brand must utilise informative content, such as video tutorials and infographics, to reduce consumer uncertainty and demonstrate product efficacy.

Targeted B2B Expansion: Beyond individual households, the brand should target small businesses, offices, and cafes that require regular glass cleaning, as the low cost and storage efficiency offer a high incentive for bulk adoption.

Strategic Distribution: To achieve effective market penetration, the brand should initially focus on modern trade channels and e-commerce platforms in major urban hubs like Dhaka, Chittagong, and Sylhet before expanding to local retail stores.

Loyalty through Refills: The marketing communication should consistently reinforce the "Last Bottle You'll Ever Buy" hook to encourage the repeated purchase of refill sachets, thereby securing a permanent place in teh consumer's daily routine.
